

Our PTS series range of big bag supports are very low cost adjustable supports for bags.

They are made of stainless steel, are highly resistant and do not have any maintenance.

The use of these bag holders is extremely simple: the forklift truck is used to position the bags in the supports.

To complement this system, we offer a wide range of conveyors, vibrating multifunction hoppers, hoppers, graders, washers, water recycling systems, etc.

## General features

- Robust structure in stainless steel.
- Suitable for bags of carrots, potatoes, parsnips, onions, turnips, etc.
- Without electrical consumption.
- Without maintenance.

## Tecnical features

	Size L, W, H (*)
