

Our wide range of elevator conveyors IGTR series are designed to transport products from one machine to another, bringing the product to the required height.

They are suitable for potatoes, carrots, turnips, etc., especially when the product comes with dirt and impurities, both dry and wet, always before being washed or polished.

They are completely made of stainless steel food grade and special design makes them easy to assemble, lightweight construction, high resistance and low maintenance.

They have sensors at the entrance and exit.

Its adjustable height and tilt legs make adaptation to any line is very simple.

There are models of all lengths and widths necessary, covering any of your requirements.

Engine power adapts to customer needs, thus optimizing energy consumption, maintenance and investment.

To complement this system, we offer a wide range of conveyors, vibrating multifunction hoppers, hoppers, graders, washers, water recycling systems, etc.

Main features

- Made of stainless steel food grade.
- Rubber band with high strength ribs.
- Low power consumption.
- Easy maintenance and cleaning.
- CE marking.
- Options:
 - Adjustable feet.
 - Fall protection product system if lateral feeding.
 - Ribs in different heights, depending on the product.
