DFT 330

The DFT series range filtering deposits are the ideal solution to remove traces of vegetable waste from our washers and polishers, or any other machine on which you want to recover the used dirt water.

The filtering system is made by an appropriate filter band on each case, mounted on a storage tank that supplies the line by a high capacity pump. By this way you save water and filter it achieved rootlets, leaves and small pieces of product easily.

It is completely made of stainless steel and has a very low maintenance.

As a complement we offer a wide range of options such as tippers, hoppers, conveyors, filtration systems, multi-function vibrating tables, washing machines, sorting machines, and etc.

Main features

- Robust stainless steel structure.
- Appropriate filter band on each case.
- Belt cleaner brush.
- Side brushes that prevent the entry of dirt and impurities that may damage the band.
- Cover registration for inspection and maintenance.
- Very low maintenance.
- Height adjustable legs.
- CE marked.

Technical features

	Capacity tank	Size L, W, H (*)	Power (**)	Weight
DFT 330	0,22 m ³	3.300x675x515 mm	2,37 Kw	400 Kg
DFT 425	1,6 m ³	2.500x2.100x1.500 mm	2,37 Kw	430 Kg
DFT 435	1,6 m ³	3.500x2.100x1.500 mm	2,37 Kw	450 Kg
DFT 640	2 m ³	4.535x615x945 mm	2,37 Kw	450 Kg
DFT 750	1,5 m ³	5.500x800x670 mm	2,37 Kw	650 Kg

(*): Other measures and performances available upon request.

(**): Indicative power, the final power depends on the type of pump installed.
