

MEH 813

MEH 1415

Our range of MEH series leaf removers are the right systems to remove the leaves and roots that come with the product from the field.

They are the perfect machines as a previous step to machines like washing machines, polishing or gauging machines.

They are suitable for carrots, parsnips, etc. eliminating leaves and roots without damaging the product.

They are made of stainless steel, have a robust structure and very simple and powerful operation.

Due to their small dimensions they can be placed without problems, in the outlet of washers and receiving hoppers in water.

They are adjustable in height and inclination to adapt to the needs of the customer and type of product in a very simple way.

To complement this system, we offer a wide range of conveyors, vibrating multifunction hoppers, hoppers, graders, washers, water recycling systems, etc.
