

Our MEHT series soil and leaf removers are the right systems to eliminate loose soil and leaves that come with the product from the field.

It is the perfect machine as a previous step to machines like washing, polishing or graders machines.

They are suitable for carrots, parsnips, potatoes, etc. effectively removing soil and leaves without damaging the product.

It is made of stainless steel, has a robust structure and very simple and powerful operation. It incorporates a special band of studs of great resistance and durability.

It is adjustable in height and inclination to adapt to the needs of the customer and type of product in a very simple way.

To complement this system, we offer a wide range of conveyors, vibrating multifunction hoppers, hoppers, graders, washers, water recycling systems, etc.
